Melanie Wolff
Vice President
Falcon Stainless, Inc

March 31, 2010

Dear Ms Melanie Wolff,

Our company wants to thank you for supporting our **Emergency Water Mobile Response Units (EWMRU)** by providing top quality products such as the stainless steel flex connectors that we use throughout the trailer.

Our **EWMRU** is a fully self contained, 21' dual axel trailer, which encompasses four stages of Filtration (Sand, MicroZ, Multi Media & Carbon) Ozone Oxidation & Disinfection, Reverse Osmosis and Ultra Violet Disinfection providing up to 21,000 Gallons per Day meeting the National Primary and Secondary Drinking Water regulations with the Application of Point of Use Systems. In order to meet NSF standards, we must use stainless steel connectors throughout the system.

Due to limited space issues within the trailer, your flex connectors are a perfect fit. They are extremely fashionable as well as durable. Thank you again for producing such high quality connectors.

Sincerely,

Christy Sue Clay
